

Cross Match Introduces Facial Recognition SDK

Lookout Verify launches at CARTES / IDentification 2009

Palm Beach Gardens, Fla. November 12, 2009 – Cross Match Technologies, Inc., a global provider of biometric identity solutions, unveils the latest addition to its facial recognition product suite. Lookout Verify will be shown November 17 – 19 at the CARTES & IDentification exhibition in Paris, France.

Cross Match delivers a comprehensive facial recognition suite, which includes:

- Lookout Collector to rapidly capture facial images from video footage and surveillance tapes
- Lookout Matcher to reliably locate and extract facial images from video footage for watch list comparison
- Lookout Verify facial recognition SDK, which enables the real-time verification of ID photos.

“Lookout Verify extends Lookout Collector and Lookout Matcher to include machine readable travel document verification,” says Bill Dumont, Senior Vice President, Worldwide Sales at Cross Match. Encapsulating industry-leading facial recognition technology, Lookout Verify compares facial images on electronic documents to the presenter’s face, as well as those stored in facial image databases.

Optimized for use in environments that require photo-based identity checks, Lookout Verify handles e-passports, PIV cards and a wide range of other documents containing facial images. Lookout Verify can be used on a single machine or in a client-server environment, utilizing SSL for secure data transmission. “Government facilities, transport terminals and medical offices are ideal application environments for Lookout Verify,” explains Dumont. “The SDK facilitates non-intrusive identity management while controlling access to secure areas.”

The CARTES & IDentification exhibition attracts decision makers from around the globe. “As one of the leading events in the secure technologies industry, CARTES is an ideal venue in which to debut Lookout Verify,” shares Dumont.
